About Above & Beyond

Since 2010, Above & Beyond has become a **leading manufacturer of high-quality tents, sails and shade solutions**, manufacturing 5,000 tents annually. With our **own production unit** based in Belgium, we take pride in controlling every step of the production process. Our dedicated team of +30 experts, including sail specialists and an innovative R&D team, ensures that every product we deliver is crafted with precision and care.

With additional capabilities in **wood and aluminum machining**, we've expanded our expertise to offer a broader range of solutions.

Our commitment to quality is evident in both the materials we use and the service we deliver. We believe in building lasting relationships with our clients by offering personalized guidance and support throughout the buying process.

Inhouse production

Our commitment to craftsmanship and innovation is at the heart of our manufacturing. Our advanced production department is equipped with state-of-the-art machinery and a team of experienced professionals, enabling us to produce high-quality tents, shelters, shade cloths and other outdoor structures.

In our pursuit of excellence, we combine various production facets to deliver distinctive products. Our tarpaulin production department, equipped with several advanced welding machines, creates durable and weather-resistant tent cloths that can withstand the most demanding conditions.

Our focus on quality is also evident in the metal and woodworking processes. Our skilled employees provide sturdy metal frames and wooden structures that form the basis for our various outdoor products.

A dedicated team of stitchers ensures strong seams, while our aluminium machining area produces high-quality aluminium components for strength and stability.

Warehouse

The warehouse at Above & Beyond is a modern, high-capacity facility designed for efficiency and scalability. With space to store approximately 5,000 pallets, it's perfectly suited for handling large volumes of goods with ease. The warehouse features four fully equipped loading docks, allowing for fast and streamlined loading and unloading operations. Combined with a well-organized layout and a highly efficient workflow, we ensure quick turnaround times and reliable handling of inventory.

Pagoda tent

The pagoda tent is an exceptionally elegant tent that can remain outdoors for extended periods. It is guaranteed to meet all strict requirements. With a sturdy frame, extremely strong canopies and an incredibly elegant appearance, the pagoda tent makes an impression regardless of the occasion or event. Thanks to the cross cables, assembly remains straightforward while the structure is extremely solid. In addition, multiple tents can easily be connected to create one large waterproof and windproof surface.

Roof

The roof of the pagoda tent is made of a PVC/PES fabric weighing 820 g/m² with a thickness of 0.6 mm. The roof is UV-resistant, rot-resistant, mould-resistant and impermeable to light. All seams are thermally welded for optimal waterproofing. The roof canvas is smooth and therefore easy to maintain. In addition, it features extra tensioning points on the inside for optimal roof tension.

Frame

The frame of this pagoda tent is made of scratch-resistant anodised aluminium tubes with a diameter of 63.5 mm and a wall thickness of 3 mm. The aluminium profiles feature grooves into which the included side walls can be slid. No more unsightly, awkward knots! The side walls simply slide into the slots, resulting in a sturdy, sleek and stylish pagoda tent. In addition, this makes the tent completely windproof.

Side walls

All included side walls feature a zip in the centre and two of them are fitted with windows. The side walls are also made of 820 g/m² coated PVC/PES fabric. All canopies of the pagoda tent are mould-resistant. These materials are M2 certified for fire safety and therefore comply with the strictest European standards. All these advantages mean that the tent can safely be left outdoors.

Options and extensions

Our pagoda tents come with smart connection options to create a larger, fully weather-resistant setup. Rain gutters are available to seamlessly connect two or more tents, ensuring a watertight surface. A vertical gutter allows you to arrange pagoda tents in a square configuration while preventing water from entering through the centre. In addition, vertical connections ensure that linked tents are not only watertight from above, but also wind- and watertight on the sides, so your guests are fully protected in all weather conditions. You will also receive stakes, carabiner hooks and tensioning straps to anchor your tent.

Anchoring

Proper anchoring of pagoda tents is essential for safety and stability, especially in windy conditions. Common anchoring options include various types of stakes, primarily used for soft ground, and concrete blocks for anchoring on hard surfaces, varying in weight and size depending on the conditions and the size of the tent. Secure anchoring prevents the tent from shifting, collapsing or being blown away, keeping the risk of injury or damage to a minimum. Choosing the right anchoring method based on location and weather conditions is crucial for safe and reliable use.

FRAME CHARACTERISTICS

Frame material	Anodised aluminium
Wall thickness	3 mm
Tube dimensions	dia 63.5 mm
Connectors	Aluminium
Engineering book available	✓
Wind resistance	87 km/h
Spare parts available	✓
Welding type	Thermal
Garantie	✓

FABRIC CHARACTERISTICS

Fabric material + coating	PVC blackout
Fabric weight	820 g/m ²
Fire class	M2 (NF P 92-507)
Tensile strength	2460 N/5 cm
Watertight + water column	Yes 2000 mm
UV-blocking + colour fastness	Yes 5
Antifungal	✓
Dirt repellent	✓
Available colours	   *
