# Above & Beyond

## **About Above & Beyond**

Since 2010, Above & Beyond has become a leading manufacturer of high-quality tents, sails and shade solutions, manufacturing 5,000 products annually. With our own manufacturing unit based in Belgium, we take pride in controlling every step of the production process. Our dedicated team of +30 experts, including sail specialists and an innovative R&D team, ensures that every product we deliver is crafted with precision and care.

With additional capabilities in wood and aluminium machining, we've expanded our expertise to offer a broader range of solutions.

Our commitment to quality is present through both the materials we use and the service we deliver. We believe in building lasting relationships with our clients by offering personalized guidance and support throughout the buying process.

# Inhouse production & R&D

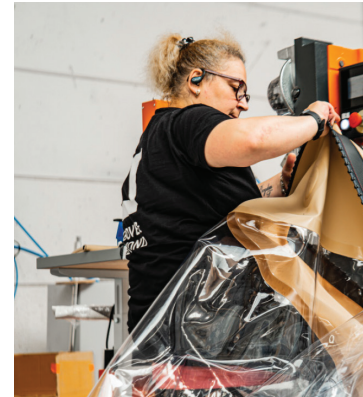

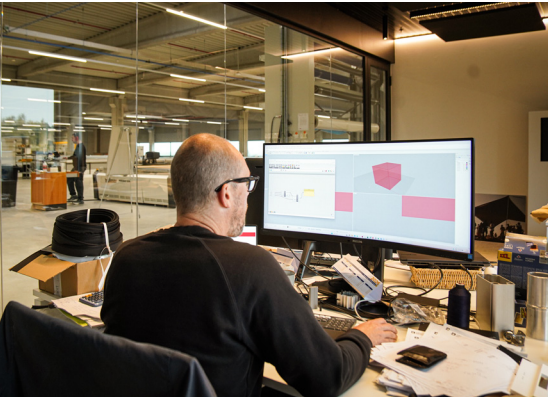

Our commitment to craftsmanship and innovation is at the heart of our manufacturing. Our advanced production department is equipped with state-of-the-art machinery and a team of experienced professionals, enabling us to produce high-quality tents, shelters, shade cloths and other outdoor structures.

In our pursuit of excellence, we combine various production facets to deliver distinctive products. Our cloth and sail production department, equipped with multiple advanced welding machines, creates durable and weather-resistant tent cloths that can withstand the most demanding conditions.

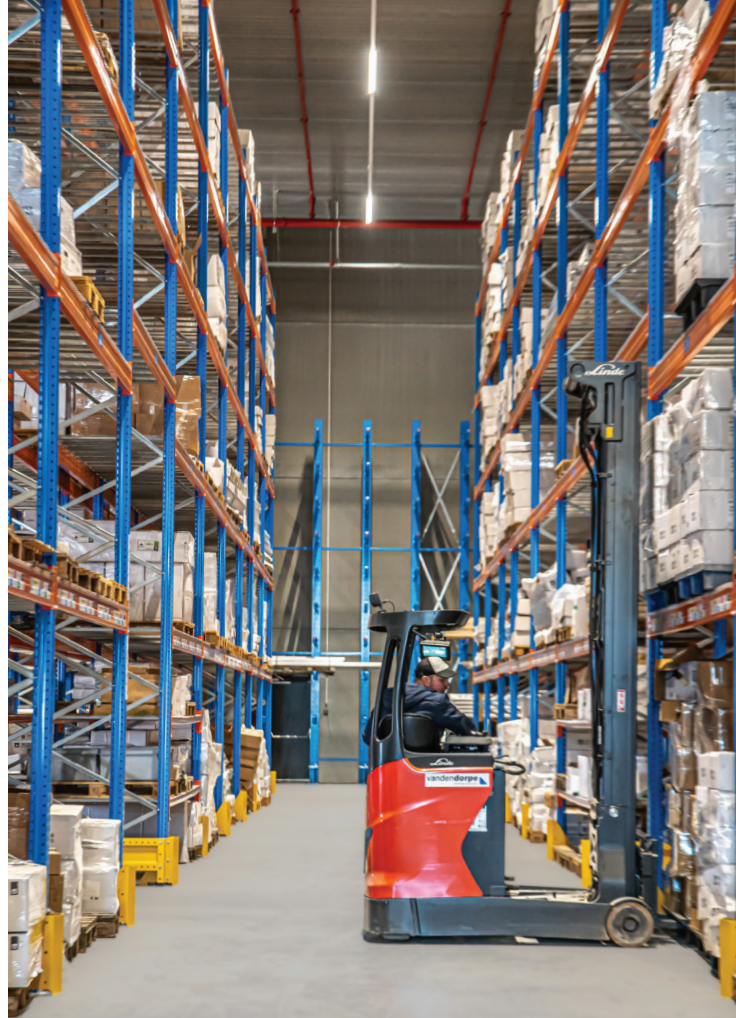

Our focus on quality is also present in the metal and woodworking processes. Our skilled employees provide sturdy metal frames and wooden structures that form the basis for our various outdoor products.

A dedicated team of stitchers ensures strong seams, while our aluminium machining area produces high-quality aluminium components for strength and stability.

## Warehouse

The warehouse at Above & Beyond is a modern, high-capacity facility designed for efficiency and scalability. With space to store approximately 5,000 pallets, it's perfectly suited for handling large volumes of goods with ease. The warehouse features four fully equipped loading docks, allowing for fast and streamlined loading and unloading operations. Combined with a well-organized layout and a highly efficient workflow, we ensure quick turnaround times and reliable handling of inventory.

ABOVE &  
BEYOND

## Stretch tent

Stretch tents combine style and versatility in one: they can be set up in no time on any terrain and instantly create a warm, inviting atmosphere. Whether it's a wedding, festival, corporate event or private party, a stretch tent adapts to any occasion. Weather-resistant, flexible in shape and sleek in appearance: effortlessly take any event to the next level.

## Triflexx

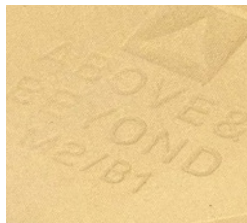

Triflexx tents are made from high-quality polyester with a **double-sided pvc coating**, making them excellently suited for a wide range of applications. They combine durability with a low weight, are easy to set up and simple to maintain. Thanks to these properties, Triflexx tents are a versatile solution for a broad range of events, professional applications and target audiences.

# Hiflexx

Hiflexx tents are made from high-quality polyester with a robust, **single-sided pvc coating**. This coating increases durability, stability and weather resistance, allowing the tents to perform excellently under intensive use and in demanding conditions. Thanks to their robust construction, Hiflexx tents are particularly suited to long-term installations and events where extra sturdiness and reliability are required.

## Clamps

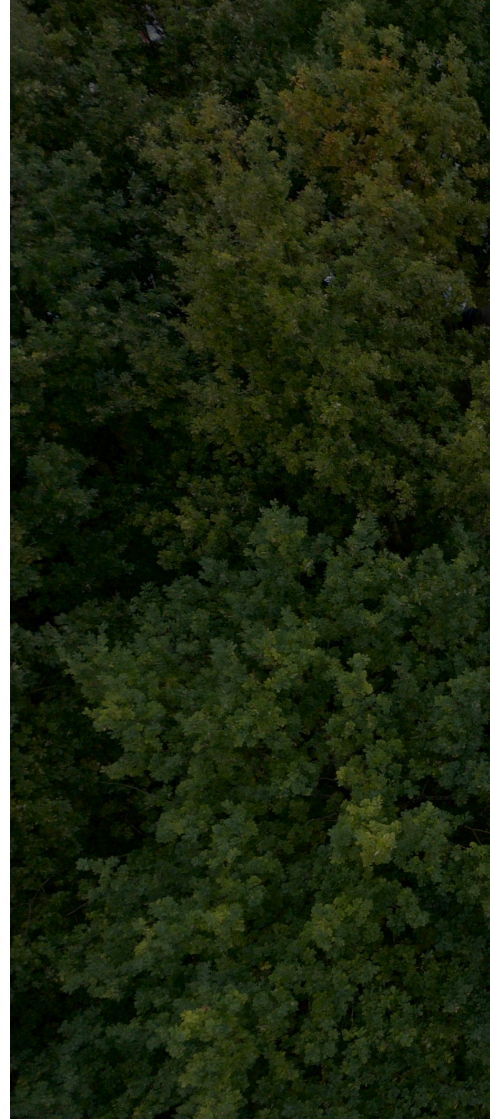

Clamps grip firmly around the edge of the tent cloth, providing a strong, reliable and adjustable fixation. Thanks to the clamp system, the tension of the cloth can be flexibly adjusted, offering extra freedom in setting up and shaping the tent. Clamps are an accessible and budget-friendly alternative to loops, while fulfilling the same essential function.

# Loops

Loops are stitched directly into the tent cloth, offering a durable, integrated fixation solution. This finish creates a sleek appearance and allows for quick assembly. The loops are spaced every 50 cm, allowing the tent cloth to be tensioned easily and flexibly. Ideal for those who value a professional finish, ease of use and a long lifespan.

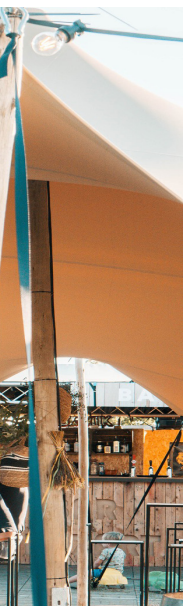

## Wooden poles - Eucalyptus

Eucalyptus wood is known for its high strength, natural durability and elegant appearance. The oils naturally present in the wood protect it against moisture, mould and insects, making it excellently suited for intensive outdoor use. Besides their sturdy properties, the wooden poles give every stretch tent a warm, natural and high-quality look.

## Wooden poles - Robinia

Our Robinia poles combine a natural, high-quality look with exceptional strength and durability. Thanks to their sturdy properties, the poles can be anchored up to around one metre deep into the ground, resulting in an extremely stable construction.

This anchoring allows for a set-up without guy ropes. This way, you make optimal use of the available space, create an open and sleek look, and prevent the risk of tripping around the tent. Robinia poles are therefore the ideal choice for terraces, hospitality applications and semi-permanent or permanent installations where both safety and aesthetics are essential.

## Aluminium poles - Connectable

Our connectable aluminium poles combine a light weight with high strength and meet the strictest stability requirements. Thanks to the modular construction, consisting of separate connecting segments, the poles are easy to transport and compact to store.

During assembly, the segments are quickly and firmly connected to one another using connecting pieces. No special tools are required, ensuring an efficient and user-friendly installation.

The poles are available in anodised aluminium or with a black or olive green powder coating, so they perfectly match the look of your tent and surroundings.

## Aluminium poles - Fixed installation

Our aluminium poles for fixed installations are developed entirely in-house and combine a sleek design with maximum functionality.

Thanks to the smart construction, a set-up without guy ropes is possible, allowing you to make optimal use of the available space and create a safe, obstacle-free environment.

The poles are designed for a durable and aesthetic installation and fit perfectly into professional settings such as hospitality terraces, recreational estates and public spaces. If desired, the poles are also easily removed during the winter season, keeping your location flexible to use.

## Side walls

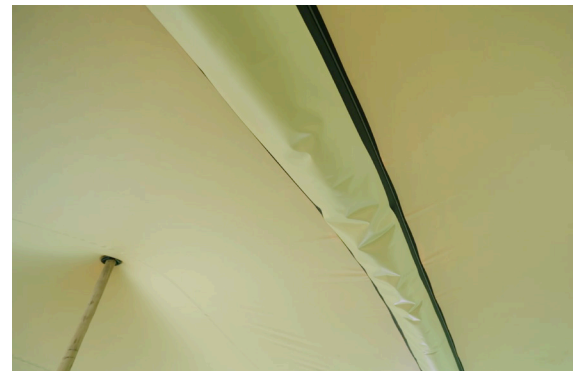

Side walls are a stylish and practical addition to your stretch tent. Both options offer unique benefits, depending on the needs of your event.

Closed side walls offer excellent protection against wind, rain and prying eyes, creating a cosy, enclosed atmosphere perfect for more intimate or weather-sensitive occasions. Panoramic walls offer a clear view of the surroundings while still protecting guests from the weather, making them ideal for picturesque locations or an open, airy atmosphere.

They are made from the same high-quality fabric as the stretch tents and provide a cohesive, high-end look without compromising on function or style.

## Connecting stretch tents - Rain gutter

DESIGN PROTECTION | No. 015133444

Our stretch tents can easily be connected to one another with a uniquely designed rain gutter, protected by a registered design. This innovative system ensures a watertight and aesthetic connection between multiple tents.

A specially developed, flexible keder is integrated into the tent cloth and welded in a watertight manner. Thanks to this manufacturing method, the connection remains completely watertight, even during prolonged or heavy rainfall.

Using a double keder profile, the rain gutter is quickly and easily mounted between the tents. Unlike traditional systems with rings, short keder strips or velcro, this solution offers a far stronger, sleeker and more reliable connection. The result is a rain gutter that stays perfectly tensioned, is fully watertight and stays firmly in place even in wind or under intensive use. This lets you effortlessly create a larger covered area without compromising on appearance, comfort or weather protection.

## Custom-made

Our stretch tents can be custom-made to meet your specific needs, offering flexibility in shape and dimensions. Whether you're looking for a unique design to match your event or need custom dimensions for a particular space, we can create a stretch tent that perfectly fits your vision.

**ABOVE &  
BEYOND**

## Anchoring

Proper anchoring of stretch tents is essential to ensure safety and stability, especially in windy conditions. Common anchoring options include various types of pegs, mainly used for soft soil, and concrete blocks for anchoring on hard soil, varying in weight and size depending on the circumstances and the size and quality of the tent. Secure anchoring prevents the tent from shifting, collapsing, or blowing away, keeping the risk of injury or damage to a minimum. Choosing the right anchoring method based on location and weather is crucial for safe and reliable use.

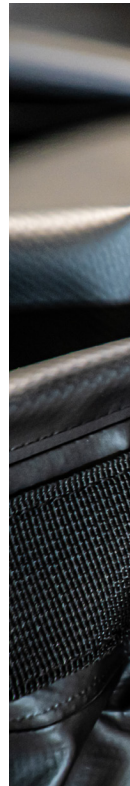

## Transportation

Safe and efficient transportation is essential to keep your stretch tent in top condition for every setup. Our stretch tents are packed in a durable, cross-shaped pvc transport bag and then placed in a sturdy wooden crate for maximum protection. This two-layer system protects the tent cloth against dirt, moisture and damage in transit. Proper storage and transport extend the lifespan of your tent and ensure your installation always looks professional and ready for use.

## Transport bag

Every stretch tent comes as standard with a durable pvc transport bag, designed for comfort and speed. Thanks to the clever cross-shaped design, the bag unfolds completely flat, so you can easily place the tent cloth inside and close the bag effortlessly - no narrow openings, no jamming zips. Sturdy handles and tension straps ensure safe transport, while the transparent label pocket lets you keep the tent size and other information visible at a glance.

| FRAME CHARACTERISTICS | Aluminium - Connectable                                                           | Aluminium - Fixed installation                                                    | Wood - Eucalyptus        | Wood - Robinia |
