About Above & Beyond

Since 2010, Above & Beyond has become a leading manufacturer of high-quality tents, sails and shade solutions, manufacturing 5,000 products annually. With our own manufacturing unit based in Belgium, we take pride in controlling every step of the production process. Our dedicated team of +30 experts, including sail specialists and an innovative R&D team, ensures that every product we deliver is crafted with precision and care.

With additional capabilities in wood and aluminium machining, we've expanded our expertise to offer a broader range of solutions.

Our commitment to quality is present through both the materials we use and the service we deliver. We believe in building lasting relationships with our clients by offering personalized guidance and support throughout the buying process.

Inhouse production & R&D

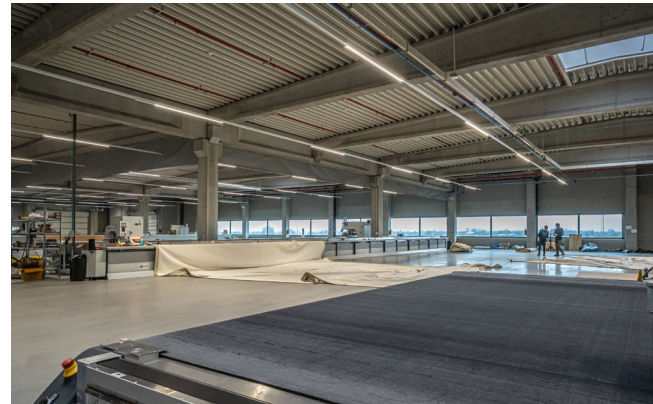

Our commitment to craftsmanship and innovation is at the heart of our manufacturing. Our advanced production department is equipped with state-of-the-art machinery and a team of experienced professionals, enabling us to produce high-quality tents, shelters, shade cloths and other outdoor structures.

In our pursuit of excellence, we combine various production facets to deliver distinctive products. Our cloth and sail production department, equipped with multiple advanced welding machines, creates durable and weather-resistant tent cloths that can withstand the most demanding conditions.

Our focus on quality is also present in the metal and woodworking processes. Our skilled employees provide sturdy metal frames and wooden structures that form the basis for our various outdoor products.

A dedicated team of stitchers ensures strong seams, while our aluminium machining area produces high-quality aluminium components for strength and stability.

Warehouse

The warehouse at Above & Beyond is a modern, high-capacity facility designed for efficiency and scalability. With space to store approximately 5,000 pallets, it's perfectly suited for handling large volumes of goods with ease. The warehouse features four fully equipped loading docks, allowing for fast and streamlined loading and unloading operations. Combined with a well-organized layout and a highly efficient workflow, we ensure quick turnaround times and reliable handling of inventory.

Star Tent

Our star tents are designed to impress: they combine elegance, durability and ease of use. Made in Belgium, they stand out at any event thanks to their impressive height and sleek design. Beyond their looks, the tent is also highly practical, with a fast and efficient set-up process perfect for making an impression with minimal effort. Whether you're organising a small gathering or a large event, this durable tent adds a touch of style and refinement, ensuring your event truly shines.

Frame StellarLite

The centre pole of the star tents is made of high-quality anodised aluminium for maximum strength and durability. The mast consists of several sections for easy transport. Thanks to its telescopic design, the roof is precisely tensioned for a stable and secure tent.

Frame Stellar

The centre pole of the Stellar is developed entirely in-house and combines maximum strength with a well thought-out design. Thanks to its modular construction, it is easy to transport and quick to assemble. The robust stainless steel screw allows the height to be precisely adjusted for perfect fabric tension, and the pole can easily be aligned if needed. At the top, the pole is securely attached to the tent's apex with a stainless steel eyelet that is inserted through the openings in both the pole and the tent cap, creating a strong, secure and durable connection.

Roof StellarLite

The roof canvas of the StellarLite is made from 420D polyester of 270 g/m² with a PU coating, extremely light yet remarkably strong. The fabric is fully watertight, UV-blocking, antifungal and fire-retardant (M1), providing reliable protection in all weather conditions. The tent is available in white, black or sand. Side walls are available as an option and attach easily via a wide 5 cm velcro strip. Both the roof canvas and the side walls can be ordered with personalised printing via digital sublimation printing. The tent is fitted with horseshoe-shaped feet for secure anchoring and a measuring cord for quick and accurate set-up.

Roof Stellar

The roof canvas of the Stellar is made from 580 g/m² PVC fabric with a high-quality matte coating. This extremely strong material is fully watertight, UV-blocking, antifungal and fire-retardant (B1/M2), ensuring long-lasting performance and professional reliability, even under intensive use. Thanks to the matte coating, the tent retains its elegant appearance, and the fabric is excellently dirt-repellent and easy to clean. The tent canvas already comes fitted with sturdy stainless steel anchoring plates with openings for heavy-duty pegs. A rope runs along the edges of the canvas from foot to foot. This rope can be tensioned using ratchets to guarantee maximum tension across all parts of the fabric.

Side walls (for both types)

Make your star tent even more versatile with side walls that perfectly combine comfort, protection and style. Closed side walls create a fully enclosed space and offer maximum protection against wind and rain, while also providing extra privacy. Side walls with panoramic windows let in abundant daylight and preserve an open view of the surroundings, keeping the outdoor experience intact.

Depending on the type of star tent, a fastening system is chosen that perfectly suits the application. The StellarLite is fitted with a strong velcro closure for quick and easy installation. The Stellar uses a robust block zipper, which ensures a tight, wind- and watertight connection and a high-quality finish.

This way, your star tent adapts effortlessly to the circumstances and always creates a comfortable and representative covered space.

Anchoring

A secure anchoring system forms the foundation of a safe and stable star tent.

With the StellarLite, the tent can be anchored using pegs or robust stainless steel anchoring plates for extra stability. The horseshoe-shaped foot of each pole is simply placed over the peg or the anchoring point of the plate, allowing for quick and reliable installation.

The Stellar comes standard with heavy-duty stainless steel anchoring plates. Each plate features multiple attachment points for heavy-duty pegs, resulting in an extremely strong and stable anchoring system. This robust construction makes the tent suitable for use in challenging weather conditions and offers maximum safety and reliability.

For the Stellar 7 and Stellar 9, a construction file is also available, compliant with EN 13782, the European standard for temporary structures and tents. This means these models can also be used for professional applications where a structural calculation or construction file is required.

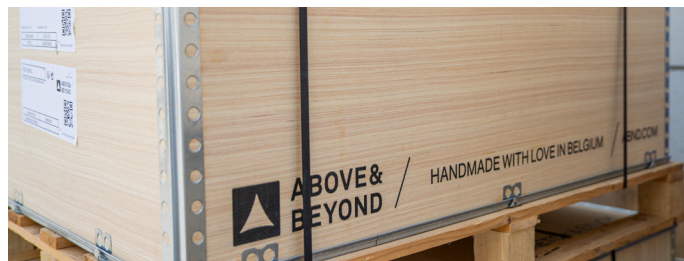

ABOVE & BEYOND

Transportation

Safe and efficient transportation of a star tent is essential to protect the materials and ensure the tent stays in top condition for every setup. Depending on the size, our star tents are packed in a sturdy PVC bag or in a durable, robust wooden transport crate for maximum protection. This packaging protects the tent against dirt, moisture and damage during handling and transport. Proper storage and transport not only extend the lifespan of the tent, but also help avoid costly repairs, reduce setup delays, and ensure your equipment always looks professional and ready for use.
